

# Final Project Proposal Requirements

Your project should solve a real-world problem or provide a unique solution in a specific domain.

## Proposal Requirements

### 1. Project Idea and Purpose

- Briefly describe the purpose of your project and the problem it addresses.
- Explain the project's main goal and what you want users to achieve by using it.

### 2. Competitor Review

- Identify at least 2-3 similar applications or projects.
- Describe their key features, strengths, and weaknesses, noting any gaps your project will fill.
- Highlight how your project will offer a unique or improved solution compared to existing competitors.

### 3. Core Features

- List at least 4-5 core features of your application.
- Include user-facing features (like login, data display, or interactions) and backend integration (such as data retrieval from an API).

### 4. Technical Challenges and Learning Goals

- List at least 2-3 technical challenges you expect to face and how you plan to address them.
- Identify 1-2 learning goals you hope to achieve through this project (e.g., mastering component composition, improving API integration, or building complex state).

## Evaluation Criteria

Your proposal will be assessed based on:

- **Clarity and Depth:** Are the project goals, components, and features well-defined?
- **Feasibility:** Given your current knowledge level, is the project achievable within the course timeline?
- **Creativity:** Does the project offer a unique or interesting solution to a real-world problem?

This proposal is your chance to showcase your understanding of Web development and plan a project that reflects your creativity and technical skills. Aim to set a strong foundation for the final project!
